OVERVIEW

Recent approvals and clinical trial results continue to enhance the treatment landscape for patients with non-muscle-invasive and muscle-invasive bladder cancer. This session will provide education on these recent updates so that you can effectively apply them in your clinical practice and ensure the best possible outcomes for your patients.

TARGET AUDIENCE

This program is designed to meet the educational needs of physicians/oncologists, nurse practitioners, nurses, physician associates, pharmacists, and other health care professionals who manage patients with cancer.

FEATURED FACULTY FROM NCCN MEMBER INSTITUTIONS

Mamta Parikh, MD, MS
*UC Davis Comprehensive
Cancer Center*

Debasish Sundi, MD
*The Ohio State University
Comprehensive Cancer
Center - James Cancer
Hospital and Solove
Research Institute*

LEARNING OBJECTIVES

- Discuss the new and emerging therapeutic options for patients with non-muscle-invasive bladder cancer and how they can be integrated into clinical practice.
- Describe the recent updates to the systemic therapy options for muscle-invasive bladder cancer as well as disease characteristics that may guide treatment choice.
- Review the results of recent clinical trials involving non-muscle-invasive and muscle-invasive bladder cancer and their potential impact on treatment planning.
